

Bovee's Wireless Air System

The Air System has an advanced wireless air bag control featuring two-way communication that alerts the user when the pressure changes, air leaks or if the compressor fails. It also has a wireless handheld remote for convenient operation. The dual path controller allows for independent inflation and deflation of each side's air bags. Air bag adjustments can be made using the digital remote while inside or outside of the motor home. The compact remote, the size of a garage door opener, has two memory buttons for frequently used settings. The system includes a VIAIR 480C heavy duty compressor and maintains pressures automatically within + or - 3 psi.

The System can be configured in many different ways depending on the customer's needs such as with or without a stainless steel pressure tank, with or without a compressor, etc. The Air System can also be ordered assembly required in several configurations for those hands-on-GMCers who want to build their own air system..

For further information and pricing contact Gary Bovee at gmcwirelessair@gmail.com.

<u>Bovee's Wireless Air Systems</u>	<u>Price</u>
System w/tank, w/compressor (fig. 1)	899.95
System wo/tank, w/compressor	799.95
System w/tank, wo/compressor	630.95
System unassembled w/tank, w/compressor	849.95
System unassembled w/tank, wo/compressor	580.95
System unassembled wo/tank, w/compressor	499.95

The system measures 12 3/4"H, 12"W, 6.5"D.
