

**TURN THE SWITCH...  
AND JOIN THE  
UNHOOKED GENERATION**

 **thermasan**  
**WASTE DESTRUCTION SYSTEM**

# The Sanitation Breakthrough, that's been Thought Through:

The Thermanan System captures the super-heat energy from the engine's exhaust and uses it to disintegrate holding tank wastes into a harmless, invisible, emission that meets the strictest requirements of the Public Health and Federal Emission Standards. The Thermanan System performs its task so thoroughly, that it has received the Seal of Approval of The National Sanitation Foundation.

The Thermanan System follows a relatively simple procedure. A chemical and a biochemical reaction is first created in the holding tank. This prepared waste is next pumped by metered injection into the heart of the system, the Sanijector. The stainless steel Sanijector screens and sprays this prepared waste into the super-heat of the engine's exhaust stream. Within the exhaust this super-heat batters and destroys all waste and bacteria. All remaining gaseous by-products are rendered invisible, bacteria free and totally harmless.

And the complete operation is activated by simply turning a

switch on the dash mounted, solid state control panel, right from the driver's seat.

Picture yourself cruising the highways free to travel anywhere and everywhere without concern for your holding tank. Imagine yourself taking that giant step toward expanded self containment and joining the thousands of other RV owners who are called the "Unhooked Generation."

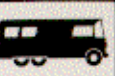

"Total Self Containment" has been the magic word of the RV industry since the first recreational vehicle rolled off the assembly line. The elusive goal of creating a mobile recreational vehicle that could duplicate the environment of the home, and yet give the RV traveler complete freedom to explore and travel into the remotest trails and back roads is today a reality. Through the introduction of generators, multi-powered appliances, LP gas and efficient, low water consuming sanitation systems, today's Recreational Vehicles can provide a comfortable, livable environment for days, even weeks before a replenishment of power supplies is necessary. Only a few hurdles still remain before the length of time of this total independence can be expanded into months.

One of the few hurdles to expanded self containment time has been the disposal of accumulated holding tank waste. Although great strides have been made over the years in making this chore as easy as possible, none of the solutions did away with the inconvenience of making a special detour to seek evacuation facilities.

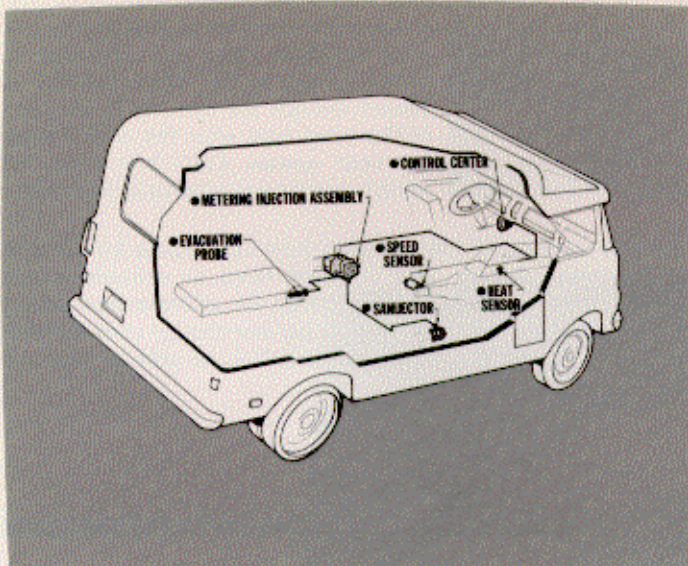

Now, however, a sanitation breakthrough has been made. This breakthrough takes and adapts the latest scientific technology used in today's sophisticated, pollution-free municipal waste disposal plants to develop a waste destruction system exclusively for the RV owner.

This giant step toward true self containment is called the Thermanan Waste Destruction System. By simply turning a switch, your recreational vehicle can be converted into a mobile, self-contained, pollution free waste destruction plant. By turning this same switch you'll say goodbye forever to the inconvenience of holding tank evacuation stops.

## Thermanan Model Selection Guide.

## Model B and BL

Models B and BL represent the second generation of Thermanas Waste Destruction Systems and replace the original Thermanas Model A (for motorhomes).

These two models are designed for installation on Chassis Mounts, Van Conversions, Mini-Motorhomes, Compact Motorhomes, Motorhomes and Custom Coaches. Either Thermanas model converts your recreational vehicle into a mobile, pollution-free waste destruction plant that will destroy holding tank waste.

Model B features a well styled, dash-mounted, solid-state control panel. On the panel are an on-off switch, two lights and a dimmer

switch. One light (Ready) tells you when the system is operating and the other (Reaction) indicates when the system is destroying waste.

Included with each system is a Speed Sensor, Heat Sensor, Metering Injection Pump, Holding Tank Evacuation Probe and a Stainless Steel Sanjector, plus all necessary waste and electrical connections for a complete installation.

Model BL has two additional features not found on the Model B. A truly fail proof holding tank sensor which signals you when to turn off your Thermanas System, and a press-to-test button to check, by remote control, the engine exhaust incineration. As this button is pressed the "Ready" and "Reaction" lights flash when the metering pump is injecting waste.

There are 3 types of systems for the B and BL.

They are:

### Model 200

In this system, only toilet wastes are collected in the holding tank. Sink, shower and basin wash water by-pass the holding tank.

### Model 600

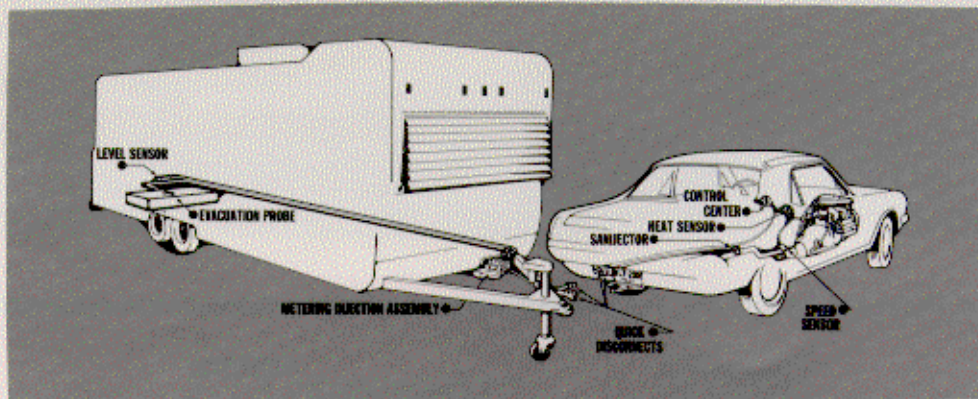

Sink, shower and basin wash water and toilet wastes all collect in a single holding tank.

### Model 2-500

The Vehicle has two holding tanks. One for toilet wastes and the other for waste water. Order this type when you want your Thermanas to draw wastes from both tanks at the same time.

Thermanas Models B and BL meet all vehicle safety codes and any of these models can be installed on new or existing vehicles. The Thermanas System in no way interferes with manual methods of holding tank evacuation.

## Models BT and BLT—for Truck Campers and Travel Trailers.

Models BT and BLT are also members of the second generation of Thermanas Waste Destruction Systems. Since Truck Campers and Travel Trailers must be towed by or mounted on another vehicle for mobility, Models BT and BLT come with specially designed, sanitary and electrical, quick disconnect fittings to link the waste transfer mechanism to the control and incineration components. Except for this one addition, the Models BT and BLT perform exactly like Models B and BL.

Model BT features the dash mounted, solid state control panel. On the control center are the on-off switch, a dimmer switch and two panel lights to tell you when the system is ready, and when the system is operating. (Same as Model B above.)

The Model BLT is the Deluxe Model for Travel Trailers and Truck Campers. It has the two new added features of the fail proof holding tank sensor to show you when to turn off the system, and the press-to-test button for checking, by remote control, the waste transfer to incineration.

There are 3 types of systems for the BT and BLT. They are:

### Model 200

In this system, only toilet wastes are collected in the holding tank. Sink, shower and basin wash water by-pass the holding tank.

### Model 600

Sink, shower and basin wash water and toilet wastes all collect in a single holding tank.

### Model 2-500

The Vehicle has two holding tanks. One for toilet wastes and the other for waste water. Order this type when you want your Thermanas to draw wastes from both tanks at the same time.

The Thermanas Models BT and BLT meet all vehicle safety codes and any of these models can be installed on new or existing vehicles. The Thermanas System in no way interferes with manual method of holding tank evacuation.

## Aqua Aire—The Most Effective Exhaust Emission Control.

A bottle of Aqua Aire is included with each Thermasan System installation and is recommended to control the exhaust emission. Aqua Aire is compatible with other holding tank concentrates and is used to supplement these chemicals in controlling bacterial odors that may occur in the holding tank. Exhaust odors merely indicate that chemical treatment is required.

Aqua Aire is easy to use. You simply pour one bottle (one pint) of the chemical into your holding tank. It makes no difference whether the tank is empty

or has some contents in it although it is most effective when the chemical is added before waste. The chemical is poured through the opening in the base of the toilet bowl after the sliding valve has been opened. Every 3 or 4 days of toilet operation add 1/2 bottle of Aqua Aire.

We also recommend Thetford Aqua Kem Concentrate for use with the Thermasan System. This chemical helps to emulsify wastes and prepares the holding tank contents for ultimate destruction. Aqua Aire and Aqua Kem are compatible and may be used together with complete safety. As with any chemical, be sure to read the directions on the bottle.

### The Thermasan Warranty:

Your Thermasan System meets all vehicle safety codes and represents the results of over seven years of research and field testing. All parts and components are engineered and manufactured with the finest materials available to guarantee a long lasting, trouble-free use. Each Thermasan System carries a one year warranty on all parts.

### A Nation-wide Network of Service Centers:

Weekly, new Thermasan Installing Dealers are being carefully selected and added to our nation-wide network of dealers. Although your Thermasan unit is designed to give years of trouble free service, occasionally you may require some minor repairs. In this case, we recommend you see any Thermasan Installing Dealer. They are factory trained and carry a supply of replacement parts. Should you ever have any questions about your system, please do

not hesitate to write or call us at our headquarters in Ann Arbor, Michigan.

### The Thermasan System is Marketed by Thetford Corporation:

The Thermasan Waste Destruction System is marketed nationwide, exclusively by Thetford Corporation. Thetford Corporation is the First Name in Recreational Sanitation Systems and Accessories. Today, the majority of Recreational Vehicles are Thetford equipped plus an ever growing number of boats are carrying Thetford systems.

Why not take time in the next day or two to stop by your Thermasan Installing Dealer's showroom and let him give you a demonstration of this truly unique sanitation breakthrough. We believe that once you've seen this system in action, you'll want to join the thousands that are now enjoying this new dimension in RV self-containment.
